

Adult Advanced Life Support (QRG)

(In accordance with Public Health England and Resuscitation Council (UK) Guidance)

For aerosol-generating procedures (AGPs) that are considered to be a high risk for transmission of airborne pathogens, ensure appropriate PPE/RPE is worn during AGP procedures.

During CPR
 Ensure high quality chest compressions with minimal interruptions.
 Airway management via a bag-valve-mask and/or igel
 Continuous compressions once airway is secured
 Consider reversible causes
 Use waveform capnography
 Vascular access (IV or IO)
 Administer Adrenaline every 3-5 min
 Give amiodarone after 3 shocks

AGP – Aerosol Generating Procedure
 PPE- Personal Protective Equipment
 RPE – Respiratory Protective Equipment
